**For Voorhees Town Center  
Orndorf & Faranda  
design 11 buildings**

Voorhees, NJ - Orndorf & Faranda, Inc., of Ardmore, PA are the structural engineers for the Voorhees Town Center project that consists of 11 buildings and a town center clubhouse. Most of the buildings have below grade parking garages and four of the buildings have a first floor retail level.

Orndorf & Faranda, Inc. designed the concrete and masonry for the garage walls and for the foundations, the structural steel framing necessary for fire ratings between the residential and retail/garages, and the wood construction comprising the residential floors.

The roof structure and residential floor framing consists of a wood truss system and the transition between retail and residential or garage and residential is a composite concrete and steel deck system. The structural design required careful detailing and coordination to articulate the architectural intent.

Orndorf & Faranda, Inc. is a structural engineering and design firm located in the central business district of Ardmore, Pennsylvania with a branch office in Greenville, Delaware. O & F is an award-winning, client-oriented firm that combines extensive in-depth experience of a larger engineering firm with the personalized service of a small firm.
